

Deel Marketing Analytics Challenge

Welcome to the Deel Marketing Analytics Challenge!

You have **48 hours** from the time you received this task to complete and return your submission. You may use any tool (Excel, Python, R, SQL, etc.) to analyze the data. Please include:

- A **presentation in PDF** format summarizing your key insights
 - *Assume the audience includes non-technical stakeholders (e.g., marketing directors)*
 - *Focus on clarity, visuals, and strategic takeaways*
- A **brief write-up or appendix** explaining how you arrived at your insights
 - *Summarize your approach, key steps, tools used, and reasoning behind your conclusions*
- Your **code and assumptions** (notebook or scripts)
- Short written answers to business questions (from Task 3) in a separate doc or slide

Please keep in consideration that you will have 20 mins to present your findings.

Good luck!

Please download the [dataset](#) and answer the following questions:

Note: it is possible to have decimal opportunity conversion metrics (e.g 2.4 sqo, opp won) because of the deployed attribution model.

Who You're Presenting To

Assume your audience for this analysis includes two senior stakeholders at Deel:

1. A **Paid Marketing Director** who cares about ROI and short-term performance of marketing spend
2. A **Head of Marketing** who wants to prove the long-term impact of awareness and brand-building efforts

They will review your analysis and expect clear, actionable insights tailored to their focus areas.

Task 1: Analyzing Sales Funnel Data

- Show how our top-funnel metrics (impressions, clicks) and bottom-funnel outcomes (demo requests, SQOs, opp won) changed over time. What patterns or seasonality do you notice? Please list possible reasons behind the patterns you observe. What might explain changes or seasonality?
- Pick three key channels (e.g., paid search, event, regional) and calculate:
 - Conversion rate from impression → click

- Conversion rate from click → demo
- Conversion rate from demo → SQO

After calculating these, explain what patterns or changes you see in these conversion rates.

- Share at least three visualizations that clearly explain what's working and what's not in the funnel.
- Based on your findings, what changes would you recommend to improve efficiency and volume?

Task 2: Paid and Brand Marketing Channel Analysis

- Choose two paid channels and analyze how cost relates to:
 - Demos
 - SQOs
 - Opportunities Won
- Pick brand-oriented channels (content & website) and show:
 - Growth trend over time
- If Deel were to increase its brand budget next quarter, how would you measure its impact? Be specific.
- If you were asked to reallocate paid budget, which channels would you scale up or down, and why?

Task 3: Scenario Analysis

This task is designed to assess how well you translate analysis into stakeholder-relevant communication and decision-making.

For each stakeholder described above:

1. Write a **short executive summary** (max 150 words) of what they should take away from your analysis
2. Give a **clear, specific recommendation** on what action they should take based on your findings
3. Explain **how you would measure success** or validate the impact of your recommendation in the next 1–2 months

Make sure each message is aligned with their goals and written in a way they would understand and act on.
